

Transmission Planner's Modeling Instructions to the Generator Owner (NERC MOD-026-1 & MOD-027-1)

The GO must provide WECC approved dynamic models for each of its generating units. The current list of "Approved Dynamic Model(s)" can be found on the WECC website at the following location (see dropdown menu):

[Reliability Assessment Committee MVS \(wecc.org\)](http://www.wecc.org)

Dynamic modeling submissions must be provided PSLF format. The TP may request equivalent PSS/e formatted models based on validation needs. Further details on the contents and format of these models can be found in the associated PSS/E and PSLF User Manuals. If a GO has an existing applicable unit's dynamic model in the TP's database (as defined in R1), the TP can provide this modeling data to the GO upon request.

Submit data to pscplanning@xcelenergy.com

Please add "*YOUR FACILITY NAME HERE*, MOD-026 [and/or] MOD-027" to the subject line of the submission.
